

Update Assistance PSO within a VPC.

Updating your VPC environment is similar as updating your environment on a physical hardware machine or a virtual machine running within Hyper-V or VMWare.

Download the update files.

First download the update files from our website www.assistancesoftware.com to your host machine.

For example for Assistance PSO

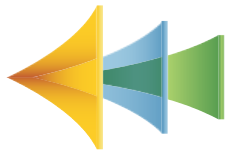

The screenshot shows the 'Solutions' section of the Assistance Software website. It contains a list of software and update files. The item 'Update Assistance PSO 2009 (version 2.3.02.18)' is highlighted with an orange border.

 -  Installation and updgrade assistance webportal 2.58 (Windows and MAC OS X)
-  Technical & Installations Documents

Get the update files into your VPC

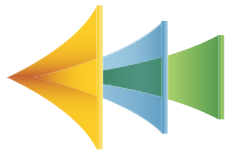

Start your VPC

Create a temporary folder within the VPC.

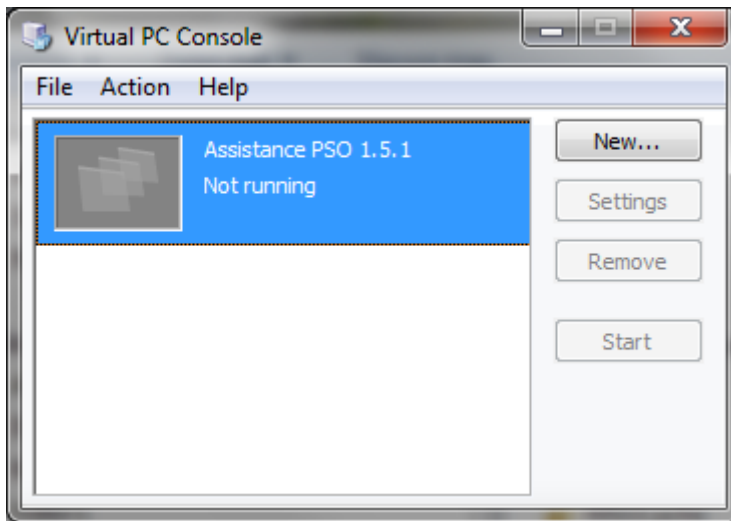

Most of the time you can drag and drop the files from your host machine into the created folder.

If this is not working try the following after the VPC is started.

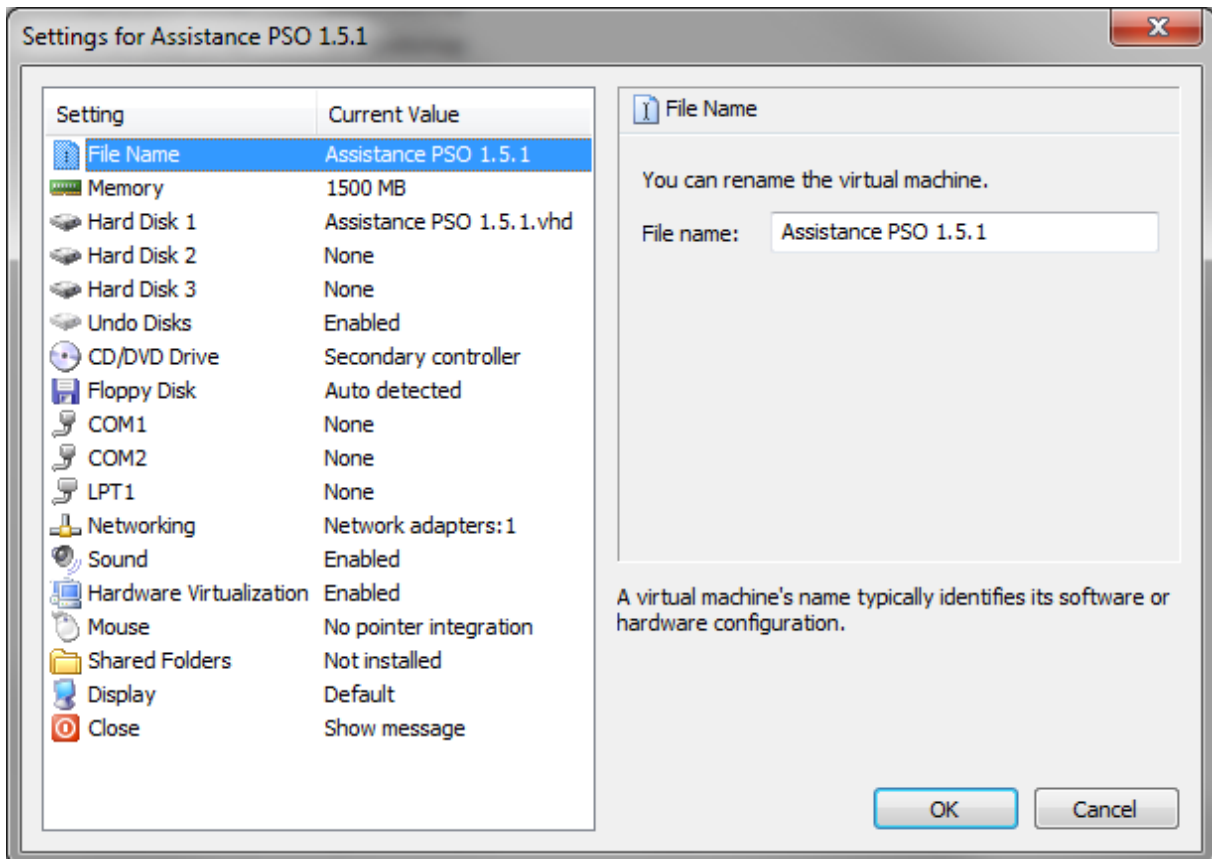

Open your VPC console

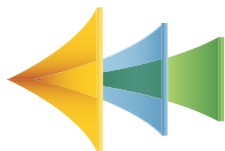

Assistance Software

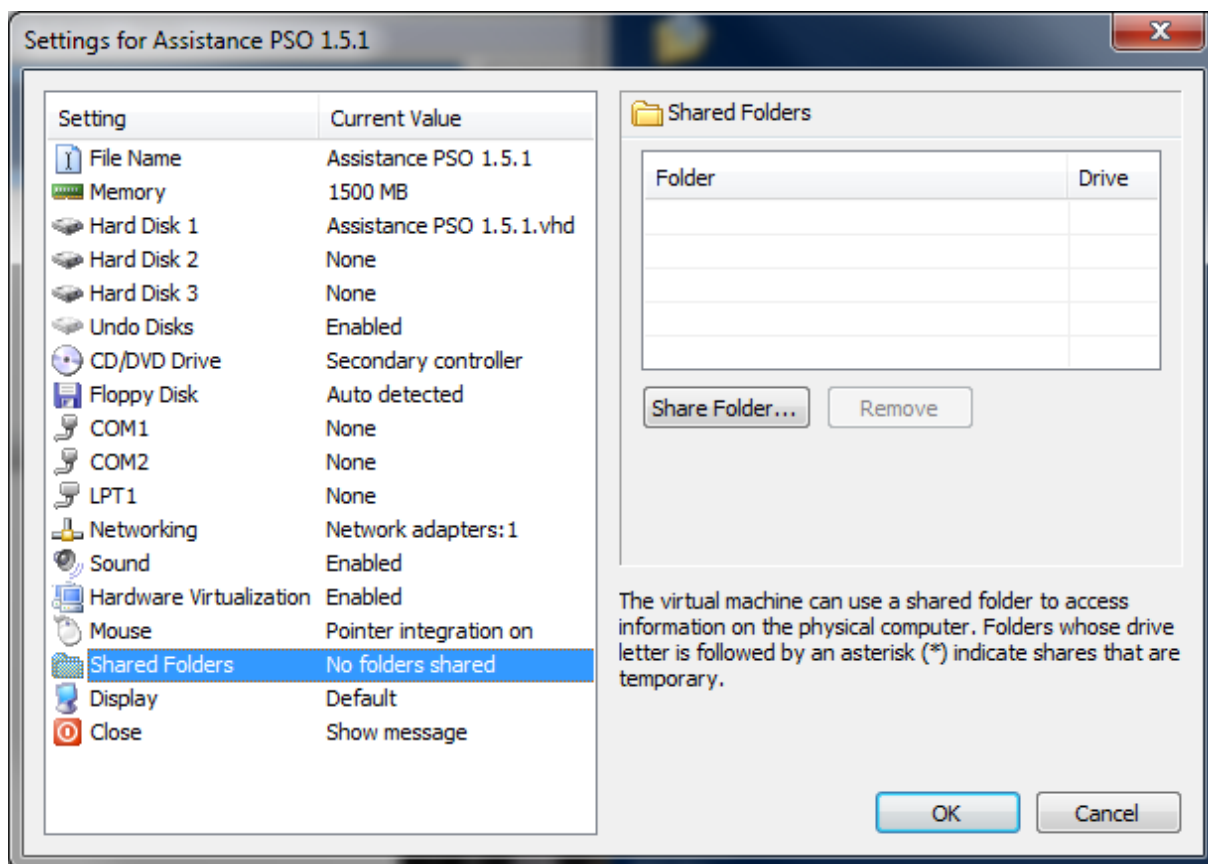

Select the VPC and then select settings

Select the option Shared Folders

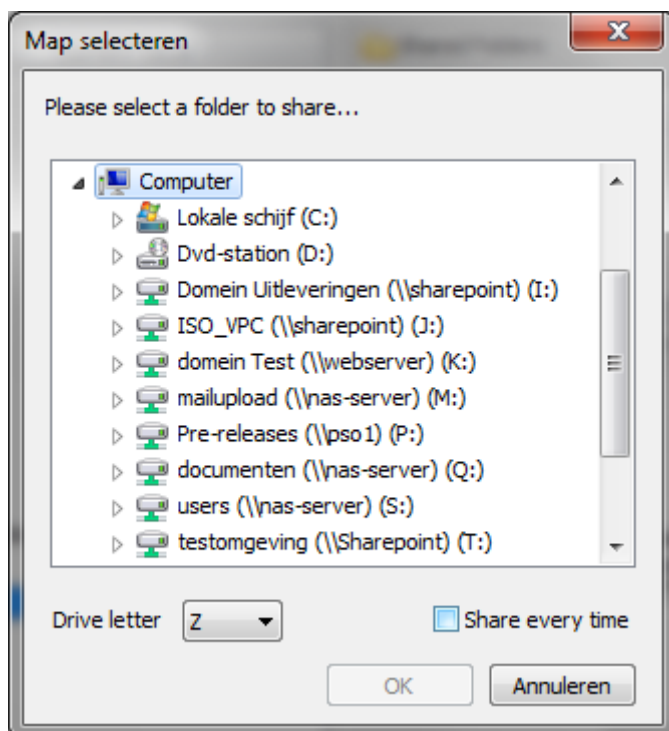

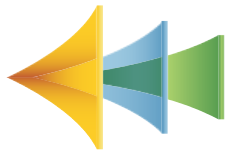

Assistance Software

Select the button Share Folder.

Browse to a folder of your local machine.

Assistance Software

This folder is now available within the VPC under the selected drive letter.

Now you can select the updated files from the selected drive letter within your vpc.

Update the program's

For exact update instructions please read the instructions that you will find within the downloaded files.
