

# Assistance PSO for Microsoft Dynamics™

# Senior

Assistance PSO for Microsoft Dynamics™ Senior was developed specially for medium-sized service providers. The powerful resource and project schedule application provide a better overview of how your organization will perform in the future and can be converted into a financial forecast with just the click of a mouse

### The resource schedule at a glance

In order to factor in future staffing requirements and expected turnover, it is crucial that employees' working ours are correctly scheduled. Once the budget has been entered, it can automatically be linked to the schedule, thus providing information about the expected progress of the project before the actual costs have even been accounted for. Assistance PSO for Microsoft Dynamics™ offers enormous flexibility to customize the schedule to your own needs, but also provides guidance. If you happen to overload a resource, your will receive a warning from the system.

**Batch invoicing**  
Invoicing is normally very time consuming, but with batch invoicing, this has become a thing of the past. Invoices can be generated automatically based on installment plans, cost-plus agreements and completeness % (performance). If you want to verify the invoice flow, the invoices can be checked in advance.

**Schedules by employee**  
Once the budget has been compiled, the individual employee schedules can be entered. All employees can check their personal schedules when working hours are recorded.

**Schedules by project**  
It is also possible to view the schedule by project. That way, you can view the scheduled activities for each project.

**User-friendly graphic interface**  
Whether you need to move a schedule item, shorten or lengthen the allotted time, it is all possible with the graphic interface. The various bars displayed in the schedule make it easy to change items.

**Telebanking**  
With the telebanking module, making payments is easy. Based on your choices, it generates a ClieOp-file that is compatible with the systems of all Dutch banks.
